Allowable Subject Matter

1. After a further search and a thorough examination of the present application and in light of the prior art made of record, claims 1-11 are found to be in condition for allowance.

Reasons for Allowance

2. The following is an Examiner's statement of reasons for the indication of allowable subject matter:

The claims are allowable over the prior art of record since the cited reference taken individually or in combination fails to particularly disclose an image decoding method and device comprising a prediction means which comprises a reference value storage means which includes means for holding reference values that are necessary for the prediction performed on a target macroblock, prediction computation means for performing prediction computations based on reference values of the reference value storage means, predicted values storage means for holding results of the prediction computation, prediction control means for controlling the reference value storage means, the prediction computation means, and the predicted value storage means, and a total storage volume of the reference value storage means and the predicted value storage means being smaller than a storage volume of predicted values for an entire image size, and the prediction control means includes means for copying data,

Art Unit: 2613

necessary for the prediction computation of a next macroblock, from the predicted value storage means to the reference value storage means.

It is noted that the closest prior art of record (Lee US 6,466,620) teaches a similar decoding method and device, however, Lee fails to particularly teach or suggest “a *reference value storage means which includes means for holding reference values that are necessary for the prediction performed on a target macroblock, prediction computation means for performing prediction computations based on reference values of the reference value storage means, predicted values storage means for holding results of the prediction computation, prediction control means for controlling the reference value storage means, the prediction computation means, and the predicted value storage means, and a total storage volume of the reference value storage means and the predicted value storage means being smaller than a storage volume of predicted values for an entire image size, and the prediction control means includes means for copying data, necessary for the prediction computation of a next macroblock, from the predicted value storage means to the reference value storage means*” as specified in the claims.

Conclusion

Any comments considered necessary by applicant must be submitted no later than the payment of issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submission should be clearly labeled “Comments on Statement of Reasons for Allowance”.
